

Secode Mobile Manager

Because the Internet and IT never sleep, certain security services must be in place and managed 24/7 - a demanding challenge for most companies. When going mobile the basic premise of deploying enterprise mobility is to enhance workforce productivity and effectively cut operational costs. While it is understandable that enterprises are concerned about the security of their valuable data and information while transmitting it over wireless networks, their IT department should work closely with the solution providers in defining the policies and security requirements for the solution. Secode Mobile Manager is a service that gives a solid foundation for successfully managing devices, security and services deployed to the end users.

Secode Mobile Manager –service provides a full-featured way to remotely manage, support and supervise mobile devices used by SMC's and enterprises.

Secode Mobile Manager main features

- Device and device security management
- Application management including application updates and settings management
- Backup and restore of data

Remote control

The remote control functionalities include device lock and device wipe capabilities OTA (Over the Air). The device can be emptied on critical data like e-mails, calendar-information and files. The device can also be locked and shut down remotely in order to prevent unauthorized access to the device. The security features of the device itself (i.e. security codes) can be controlled centrally with Mobile Manager. Settings like Access Points (2G, 3G etc.) WLAN, VoIP, E-mail can also be centrally managed remotely with the service.

Application Management

Mobile Manager is the perfect tool to remotely, install, start and remove applications on the device. Mobile Manager also provides for application settings management using SCOMO –profiles for applications like Mail for Exchange and Mobile Antivirus and Firewall clients. Mobile Manager in addition to SCOMO also support a wide range of application settings management mechanisms. The Application Management functionalities of Mobile Manager can be used to manage virtually any application. Push-Mail, Anti-Virus, Firewall and Encryption applications are typically managed remotely with the service.

Backup and Restore

Backup and restore of data is a feature of Mobile Manager that provides for remotely OTA managed backup and restore of data stored on mobile devices. Standard predefined backup tasks are SMS, calendar, contacts as well as different combinations of these.

Service Startup

Starting to use Mobile Manager is very easy because nothing has to be installed on site at the customer. The customer only has to subscribe on the necessary amount of user rights and inform Secode whether he/she wants to manage the service him-/her-self or have Secode do the managing. After this Secode open the service and inform the customer about how to operate the service and how the support is arranged for.

Supported Devices

- Nokia Series 60 phones (2nd and 3rd ed.)
 - E- and N-series phones
- Nokia Series 80 –phones
 - 9500 and 9300(i)
- Sony-Ericsson phones (UIQ 2 and 3)
 - P900/P910/P910i, P990, P1i
- Windows Mobile Phone 5 and 6 devices
