

## Secode Pushmail

Because the Internet and IT never sleep, certain security services must be in place and managed 24/7 - a demanding challenge for most companies. When going mobile the basic premise of deploying enterprise mobility is to enhance workforce productivity and effectively cut operational costs. While it is understandable that enterprises are concerned about the security of their valuable data and information while transmitting it over wireless networks, their IT department should work closely with the solution providers in defining the policies and security requirements for the solution. Secode Pushmail is a service that helps corporations grant their users the possibility to continuously keep track of emails and calendar events for improved efficiency in their every day work.

Secode Pushmail helps the users manage email, contacts and calendar functions wherever they are - in the office or on the go. Secode Pushmail runs in real time, so there is no need to wait for messages or calendar invitations to arrive. Secode Pushmail also integrates with the corporate directory making it easy to manage.

Users can synchronize personal contacts using an Outlook or Lotus Notes client. Additional to this, they have the ability to do global address list look-ups. Access to calendar data is also available on the device with updates pushed over-the-air. Users can create, edit and delete meetings and appointments as well as change the accept/decline status of a meeting. Meeting reminders are presented with visual and sound indicators provided by the native calendar functionality and future events are automatically synced to the device.

To save costs and ensure longer battery life, the end-user can specify when messages are sent to the device, put it in stand-by mode if roaming and also set it to automatically go into pause mode if the battery is low. Upgrades to new versions of software can take place over-the air for easy life-cycle management.

### Features

- Real-time email service
  - Downloading and sending attachments
- Real-time calendar service
  - Accepting meeting requests
  - Sending of meeting request
- Corporate Directory (Global Address List) available
- Synchronizing of contacts
- Network communication compressed and encrypted (AES-128)
- Works independent of carrier network

- Service platform hosted in EU
- Support for simultaneous use of multiple devices
- Support for simultaneous use of multiple email-accounts
- Pushmail clients can be managed with Secode Mobile Manager

### Service Startup

Starting to use Mobile Manager is very easy because not much has to be installed on site at the customer. The customer mainly has to subscribe on the necessary amount of user rights and inform Secode whether he/she wants to manage the service him-/her-self or have Secode do the managing. After this Secode open the service and inform the customer about how to operate the service and how the support is arranged for.

### Supported Devices

- Nokia Series 60 phones (2nd and 3rd Ed.)
  - E- and N-series phones
- Nokia Series 80 –phones
  - 9500 and 9300(i)
- Sony-Ericsson phones (UIQ 2 and 3)
  - P900/P910/P910i, P990, P1i
- Windows Mobile Phone 5 and 6 devices
