

## Webinar

# Increase business value from log data with SIEM as a service

Collecting and analyzing logs is crucial to the security and compliance needs of today's organizations. Secodes SIEMaaS (SIEM as a Service) will help you deliver cost savings, real value and a higher level of security for your organization.

Secodes expert in SIEM systems, Erik Ginorio, will explain what SIEM is in general and what Secodes SIEMaaS can do for your organization. He will also cover why a full-blown in-house SIEM (Security Information and Event Management) deployment can be very costly in terms of money and resources and why many of those projects fail.

### **Erik will among others, cover the following during session:**

- What is SIEM?
- Pitfalls of standard SIEM project and how to avoid them
- Identifying the scope, drivers and goals
- Benefits of SIEM as a service

**Join us on Tuesday February 7<sup>th</sup> at 10:00-10:40 (CET)**  
(11:00-11:40 Finland)

### **Register your attendance**
